The Geotechnical Investigation for Legal-Insurance Claims

Wednesday, January 21, 2015
16:00 – 17:00, 2355 GG Brown Building

By
Larry Jedele, PE, Vice President, SME

Abstract: Even though the geotechnical engineer is trained to address technical issues, there are occasions in practice, especially for projects that have legal or insurance ramifications that he/she needs to use not only their technical skills, but their intuitive and “detective” skills to determine cause and effect. This presentation will provide a broad overview of Mr. Jedele’s experience with legal and insurance claims. He will share with you thoughts on approaching these assignments along with implementing basic engineering concepts and the value of published information with case histories of varying alleged claims.
Note: Visitors who do not have a parking permit, should park here or other Visitor Parking (VP) locations with parking meters.
